

Nepal

Our results and impacts in 2014

The impacts of our work

Strong performance this year means that we achieved a sizable health impact*:

	528,000	people across Nepal were using a family planning method provided by MSI
	250	maternal deaths averted
	85,000	unsafe abortions averted
	126,000	unintended pregnancies averted
	£4.1 Million	Direct healthcare costs saved (2014 GBP)

Options that women want

We are committed to making sure that an individual can choose the method of contraception that is right for them. That means offering a full range of contraceptive choices, including long-acting and permanent methods (LAPMs) and short-term methods (STMs).

What methods are our clients using in 2014?

88%
Sterilisation (MIF)

6%
Implants

2%
IUDs

4%
Short-Term Methods

CYP Delivery

The couple year of protection** (CYP) is the key metric used by organisations delivering contraception and safe abortion/PAC services. It allows us to track the performance of our country programmes in a consistent way.

The services that we provided in 2014 resulted in 411,287 CYPs.

This is a 7% decline on last year.

At MSI, we focus on the needs of the individuals who we see at our centres, outreach sites, social franchises and in their communities. We strive to adapt our service delivery to best meet the needs of our clients, working to make sure that our channels remain relevant, convenient, and accessible.

Clinics	201,667
Outreach	115,549
Social Franchising	0
Social Marketing	93,960
MS Ladies	0
Unclassified	111

* Impact estimates and family planning user figures were produced using MSI service statistics, and our peer-reviewed Impact 2 model (version 3).
